Item crafted from wood which are exposed harsh external elements requires long-lasting protection against all conditions. To ensure longevity and quality of the finished product, it is important to ensure strong collaboration between the wood supplier, manufacturer, paint manufacturer, certification bodies and the end customer. This 360-degree approach allows Sayerlack to produce coatings for wooden items exposed to all outdoor environments, with a guarantee of high protection from the elements, temperature changes, ultraviolet rays, chemical aggression and mechanical stress.

The **high quality** and **broad offering** of the Sayerlack **Hydroplus range** is able to meet any needs in the exterior market.

All wooden components of **exterior joinery**, from windows and doors, **load-bearing structures** and beams found in wooden buildings, to **tables**, chairs, **gazebos and decking** which are part of outdoor living require products with particularly good protective properties to resist deterioration caused by the sun and atmospheric impacts for as long as possible.

Durability is the primary factor we meet: **Hydroplus water-based coatings**, designed to reduce the absorption of humidity and solar radiation, has guaranteed top-level performance. Unlike solvent-based products, water-based products maintain a high degree of elasticity over time, which allows the coating film to follow the movements of the wood without being damaged. Water-based coatings are non flammable, dilution and cleaning of the equipment are done with mains water, they allow rapid cycles without self-combustion and lifting phenomena, drying times are short.

For Sayerlack, **environmental sustainability** and safe use is essential. We achieve this through reduction in solvent use, eliminating dangerous substances and utilising natural materials. With this approach we promote the use of the best available technologies, while limiting the production of harmful emissions.

In addition to water-based products, Sayerlack also offer solvent-based coating systems, which complete the range by meeting specific needs in terms of resistance and application methods. All without losing sight of the environmental demands which are put on these products. One of the most important objectives: through the development of our technologies, eco-friendly solvent-based coating products are created, by delivering a significant reduction in VOC emissions.

The continuous search for excellence and collaboration with external certification bodies have allowed Sayerlack wood paints to receive important awards: the **CATAS QUALITY AWARD**, the **CATAS QUALITY AWARD PLUS**, the **CATAS WKI PREMIUM** and the **CATAS WKI PREMIUM PLUS - COATINGS SYSTEM FOR EXTERIOR**. \*

Four prestigious certifications that attest that Sayerlack coating systems have passed the rigorous tests carried out to determine their performance, after being subjected to the accelerated natural aging test.

The **KOMO TYPE III\* certification**, issued by an external certification body, guarantees the entire painting process is able to achieve the resistance required for products defined "stable by the EN927-1 regulation, even in critical temperature (16°C) and humidity (65%) conditions.

The original beauty of the prestigious items coated with Sayerlack products will thus remain unchanged over time.

\*Check the colours and gloss levels involved in the certification.

# HYDROPLUS WATER-BASED WOOD STAINS

Hydroplus wood stains penetrate deep into the wood, ensuring the product lasts a long time. In pigmented cycles, the impregnating stains, in addition to highlighting the natural beauty of the wood, absorb UV radiation, protecting the wood from premature aging. Sayerlack does not recommend using a transparent impregnating stain to treat products intended for outdoor use. Even in lacquered cycles, the use of a first coat of impregnating stain is recommended, which improves the adhesion of the products applied subsequently to the wood.

# AM0572 HYDROPLUS WATER-BASED PROTECTIVE WOOD STAIN

Water-based wood stain, to be applied directly to raw wood, suitable for protecting wood from fungi and mold, according to European regulation BPR n. 528/2012. The product, colourless, is ready to use and contains specific and selected active ingredients capable of destroying harmful organisms present in wood such as the blue stain fungus or xylophagous basidiomycete fungi.

# HYDROPLUS INTERMEDIATES AND BASECOATS

The Hydroplus range includes products for both thixotropic spray applications and intermediates for flow coating, both clear and pigmented. Thixotropic basecoats in general simplify and optimize sanding operations and thus obtain final surfaces of superior quality. Intermediates used for flow coating optimize productivity. The basecoats also include the category of sealers, capable of allowing the coatings of particularly tannic woods or woods rich in extractives and/or tannins.

# AM0485 HYDROPLUS WATER-BASED INTERMEDIATE INSULATING BASECOAT

Intermediate basecoat suitable for the protection of tannic woods (iroko, oak, chestnut, etc.) exposed to the outside. Its particular formulation allows to provide an adequate solution to bleeding phenomena caused by substances contained in the wood. The result is a reduced formation of halos and a reduced browning of the pore caused by tannic substances. It is also particularly suitable for coating porous woods to reduce blowholes.

# AM0490 HYDROPLUS TRANSPARENT WATER-BASED INTERMEDIATE BASECOAT FOR EXTERIORS

Water-based intermediate suitable for flow-coating and immersion coating of wooden artefacts for exteriors, it has good coverage and transparency characteristics; it is also easy to sand both with automatic brushing machines and by hand. However, the application of a preventive coat of AM0546/XX or AM0549/XX impregnator remains mandatory.

# AM0562 TWO-PACK WATER-BASED BASECOAT FOR EXTERIORS

AM0562/XX is a two-pack, thixotropic water-based basecoat designed for exterior applications. Thanks to its characteristics, it is particularly suitable for carrying out water-based cycles on woods that are extremely rich in extractives such as Iroko, Oak, Chestnut, etc. AM0562/N0 can be pigmented with water-based pastes from the XA2006/XX series (up to 5%).

# AM0422 ONE-PACK CLEAR WATER-BASED BARRIER BASECOAT FOR EXTERIORS

It is a one-pack thixotropic water-based basecoat with good sandability and coverage, as well as high transparency. It has been successfully tested on difficult woods such as Russian larch, solving the problems created by the extractives contained in the wood. It has been tested with equal success on multilayers for armored doors, where the presence of glues can give rise to whitening in the paint film. It has no insulating power against the tannic substances typical of oak and chestnut or against the extractives of iroko.

# HYDROPLUS TOPCOATS

Since Hydroplus topcoats are thixotropic, it is possible to apply a high thickness of product, maintaining an excellent level of distension and transparency, gloss retention and non-yellowing of the film. The paint film that forms maintains a high elasticity over time, avoiding “blocking” phenomena.

In order to guarantee good outdoor resistance, Hydroplus clear topcoats have been formulated with an optimal dose of UV absorbers, which protect the product from degradation, reduce color changes and increase the durability of the coating film. The pigmented topcoats contain highly covering pigments that are resistant to sunlight.

Hydroplus water-based coatings can be applied with normal coating systems (airless, airmix, electrostatic), provided that the building materials of the equipment are suitable for contact with water. Water-based coatings are also suitable for use in painting systems that provide for the recovery of the sprayed material.

# AZ98 PIGMENTABLE WATER-BASED CONVERTER FOR TINTOMETRIC SYSTEM

The thixotropic converter AZ98XX/BB can be used both as a white topcoat and mixed with the water-based pastes of the XA2006/XX series according to the doses indicated on the form. The peculiar characteristics of the product are the absence of "blocking" phenomena, the application versatility and the durability over time (thanks to the elasticity of the applied film).

# XA99 HYDROPLUS WATER-BASED PIGMENTABLE CONVERTER FOR EXTERIORS

It is a thixotropic converter suitable for being pigmented with water-based pastes of the XA2006/XX series. The XA99XX/BB series can also be applied as is, while the XA99XX/NN series must be previously pigmented with XA2006/XX pastes in order to be applied.

# AZ35 HYDROPLUS WATER-BASED THIXOTROPIC PIGMENTABLE CONVERTER FOR EXTERIORS

It is a one-pack water-based converter with elasticity and durability that make it ideal in the field of outdoor wood protection. Excellent water resistance and wet adhesion distinguish it. Furthermore, it stands out for its high surface hardness and excellent resistance to softening caused by contact with creams.

# AZ21 HYDROPLUS WATER-BASED THIXOTROPIC TOPCOAT FOR EXTERIORS

It is a one-pack water-based topcoat with elasticity and durability that make it ideal in the field of outdoor wood protection. The finish complements the existing series, favoring the characteristics required in specific industrial uses such as distension, transparency and water resistance, without the need to introduce a cross-linker.

# AZ36 TWO-PACK WATER-BASED TOPCOAT FOR EXTERIORS

It is a two-pack, thixotropic water-based topcoat ideal for entrance doors, garages, fixtures and outdoor furniture. The finish can be pigmented with water-based pastes XA4034/XX and XA2006/XX in a wide range of colors. The characteristic of being two-pack provides greater performance in terms of mechanical resistance (less softening by sweat and creams) compared to one-pack water-based finishes.

# HYDROGOLD

HYDRO GOLD expresses innovation by overcoming limits, the challenge that fascinates us the most.

The HYDRO GOLD project, which lasted over 3 years, was divided into 3 main phases:

- study of the causes of degradation of wood and coating film;
- formulation of coating products, with the aim of achieving maximum protection;
- accelerated aging tests on new products applied on wood.

Aware of the long life of its products, Sayerlack reserves various types of guarantees for its customers\*: the ANTI-AGE SYSTEM guarantee, on certified products, which guarantees 10 years of durability for external windows painted with the Hydroplus cycles selected for this purpose; the Hydro Gold guarantee, which guarantees up to 18 years on windows. For further information, please refer to the sales representatives.

\*Terms and restrictions may apply. Please contact Sayerlack for details.

### AM0303 - HYDROGOLD UNIFORMING WATER-BASED PIGMENTED WOOD STAIN FOR EXTERIORS

Wood stain for stained cycles, particularly suitable for coniferous woods. Rich in UV absorbing filters to guarantee extra protection of the wood.

# PRODUCTS FOR BEAMS & DECKING

Whenever we find ourselves working with semi-stable or unstable structures completely exposed to the outside, such as gazebos, fences, gates, garden furniture or decking, instead of a stable structure (door and window), inserted inside a masonry work and protected by it.

Wood is more exposed to the absorption of humidity and any excessively thick coating films will inevitably be ruined. In these conditions, it is advisable to adopt solutions capable of protecting the wood from solar radiation and reducing the absorption of humidity, but above all, of following the movements of the wood that will occur. The wood itself could split due to the movement, but the coating must follow it and be easy to maintain.

## AM0631 - HYDROPLUS WATER-BASED PIGMENTED WOOD STAIN FOR EXTERIORS

Pigmented wood stain for roof beams and under-roof, with a wide range of colors available.

## TU218 - MATT PIGMENTED SELF-SEALER FOR EXTERIORS

Self-sealer pigmented with solvent-based pastes, usable for products requiring high performance.

PRODUCT TYPE	CLEAR/ PIGMENTED	METHOD OF USE	AREA OF USE	AVAILABLE COLORS
SELF-SEALER	WHITE AND PIGMENTED	SPRAY	EXTERNAL JOINERY	TU0218/13 SELF-SEALER WHITE 10 GLOSS  TU0218/41 SELF-SEALER WHITE 40 GLOSS  TU0218/BB SELF-SEALER WHITE 30 GLOSS  TU0218/N0 SELF-SEALER NEUTRAL FOR EXTERIORS

# SOLVENT-BASED SYNTHETIC PRODUCTS

Synthetic products for items exposed to the outside are normally composed of long-oil alkyd resins, produced in the Pianoro plant, and have excellent application conditions, resistance to frost, initial gloss, absence of blocking, chemical resistance, reduced grain lifting, applicability on all wood species.

On some occasions, to maintain an old item, because you are working in non-optimal temperature or application conditions, or because water could come into contact with the surface prematurely, it is still preferable to use traditional and proven synthetic products. The Sayerlack range includes synthetic impregnants and finishes and even a “marine flattening”.

## EM0551 - SYNTHETIC BASECOAT

Synthetic basecoat characterized by high filling, fast drying and easy sanding.

PRODUCT TYPE	CLEAR/ PIGMENTED	METHOD OF USE	AREA OF USE	AVAILABLE COLORS
BASECOAT	CLEAR AND WHITE	SPRAY	EXTERNAL JOINERY	EM0551/13 WHITE BASECOAT FOR OUTDOOR  EM0551/00 CLEAR BASECOAT FOR EXTERIORS
